

Module 1 — Python Bridge Assignment

Module 2 is the first module where you'll really get into Python: data pipelines, functions, file I/O, and PyTorch tensors. This bridge assignment makes sure everyone is ready.

Due: A role: Saturday. B role: end of session today.

Grading: Completion

Self-Assessment

Go to the Slack course channel. Add an emoji reaction: A or B.

Can I write a Python function that takes arguments, uses a loop, and returns a value — without looking anything up?

- **If no** → **you're A role**. You'll work through interactive Python lessons.
- **If yes** → **you're B role**. You'll mentor A-role peers and write a summary of what you taught.

If you're unsure, choose A role. The lessons are useful review even if you have some Python experience.

A Role — Python Foundations

Work through learnpython.org — free, interactive, runs in your browser, no account needed. Scroll down to the **Learn the Basics** section and complete the lessons listed below.

Lessons to Complete

Learn the Basics (13 lessons):

- ☐ Hello, World!
- ☐ Variables and Types
- ☐ Lists
- ☐ Basic Operators
- ☐ String Formatting
- ☐ Basic String Operations
- ☐ Conditions
- ☐ Loops
- ☐ Functions
- ☐ Classes and Objects
- ☐ Dictionaries
- ☐ Modules and Packages
- ☐ Input and Output

Advanced Tutorials (1 lesson):

- ☐ List Comprehensions

Tips

- Work in your group — discuss the exercises, compare answers, ask each other before asking a TA
- **Functions** is the most important lesson for Module 2. Make sure you understand `def`, parameters, return values, and default arguments before moving on.
- You won't finish all 14 lessons in-session if you're new to Python — that's expected. Complete as much as you can to prepare for Module 2, and keep going after the session.

B Role — Mentor + Summary

During the Session

Sit with 1–2 A-role peers in your group. Help them work through the learnpython.org exercises:

- Answer questions, explain concepts, talk through tricky exercises
- Help through exercises without typing or solving for them — the goal is understanding, not speed
- If they're stuck on a concept, try explaining it a different way or drawing it out
- Pay attention to what's hard for them — you'll write about this to sharpen your professional writing in English without using translation tools.

When Not Mentoring

- Review remaining [aispire-tutor](#) PRs, build new features, or improve the project.

Mentoring Summary

Write 200–400 words covering:

1. **Who you helped** and what topics you worked on together
2. **What questions came up** that surprised you or that you couldn't answer
3. **What you reinforced** by teaching — what do you understand better now?

Practice writing professionally about technical assistance in English without using translation tools.

Submission

Submit via [TalentLMS](#) → **Module 1** → **Python Bridge Assignment**:

- **A role:** Screenshot showing your learnpython.org progress, or a text summary of which lessons you completed and where you are.
- **B role:** Your mentoring summary. Do not use a translation tool. Write professionally in English to improve your technical writing and communication skills. List members of your group, note what was challenging for them, and how you helped. Include any observatio or thoughts from the day.
